

Day 04-Python Logic Test

Q.2) Write a Python program to find if a given string starts with a given character using
Lambda.

```
name=input("Enter name: ")  
character=input("Enter single character: ")  
  
result=lambda name,character:name[0]==character  
print(name,character)
```

```
Enter name: sachin  
Enter single character: k  
sachin k
```

```
Process finished with exit code 0
```

Q.3) Write a Python program to filter a given list whether the values in the list are having
length of 6 using Lambda

```
mylist=["sachin","mahesh","Omkar","Saurabh","Sai","Nikhil","Pillu  
","Raj"]  
  
result=list(filter(lambda k:len(k)==6,mylist))  
  
print(result)
```

```
['sachin', 'mahesh', 'Nikhil']
```

```
Process finished with exit code 0
```
